

# Expand Your Communications with the Ultimate SMS Solution

## The MultiModem® iSMS

Intelligent SMS server with API sends application information via affordable text messaging.

This standalone, ready-to-use device leverages text messaging to cost-effectively send or receive information, instructions, status updates or alerts. This SMS server is unique in its ability to integrate text messaging communications into third party applications for superior, customization, automation and compatibility for M2M (machine-to-machine) and business applications. Its highly flexible API makes the possibilities endless.

### Benefits:

- Tie directly into existing applications through API
- Sends application information by SMS text message
- Integrated server, database and quad-band GSM modem
- Easy-to-use web interface to send/receive SMS
- Web-based management

### Ideal applications include:

- Alerts: Closings, Announcements, Notifications
- Client Appointment Reminders
- Inventory Level Notices
- Location and Time Coordinates
- Meteorological Readings
- Remote Field Notices
- Threshold Alerts
